

## Task 2.5:

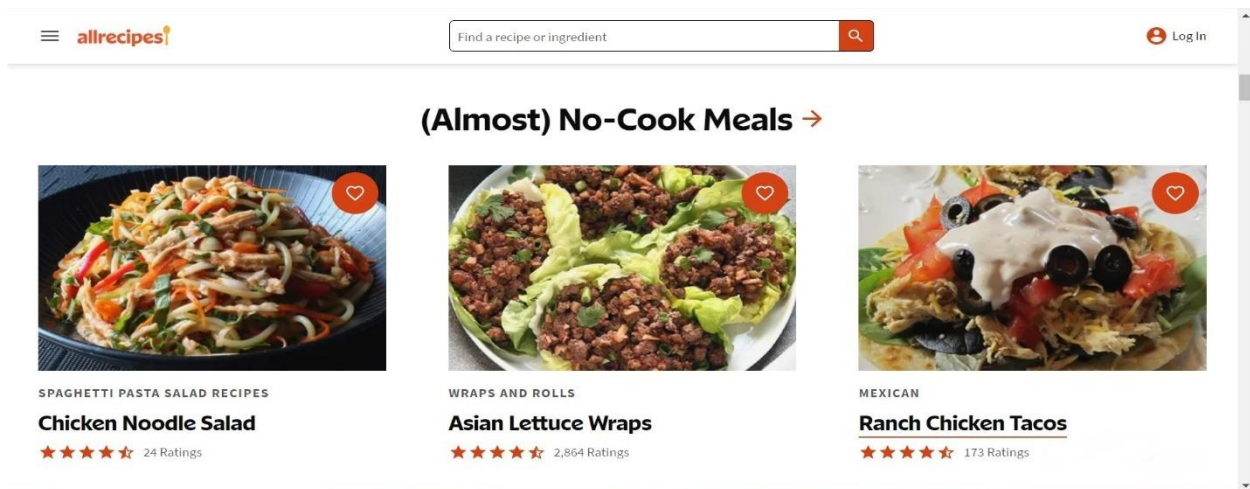

### 1. Update Models

For my recipes model, I have included name, ingredients, cooking time, difficulty, and description attributes. I'm adding new attributes like Picture, author, creation date for more detailed documentation of recipes and when they have been created and by whom. For the description I added max\_length and default value in case there is no description.

For the users' model, I just added the pic and bio, so users can upload their photos and talk about themselves.

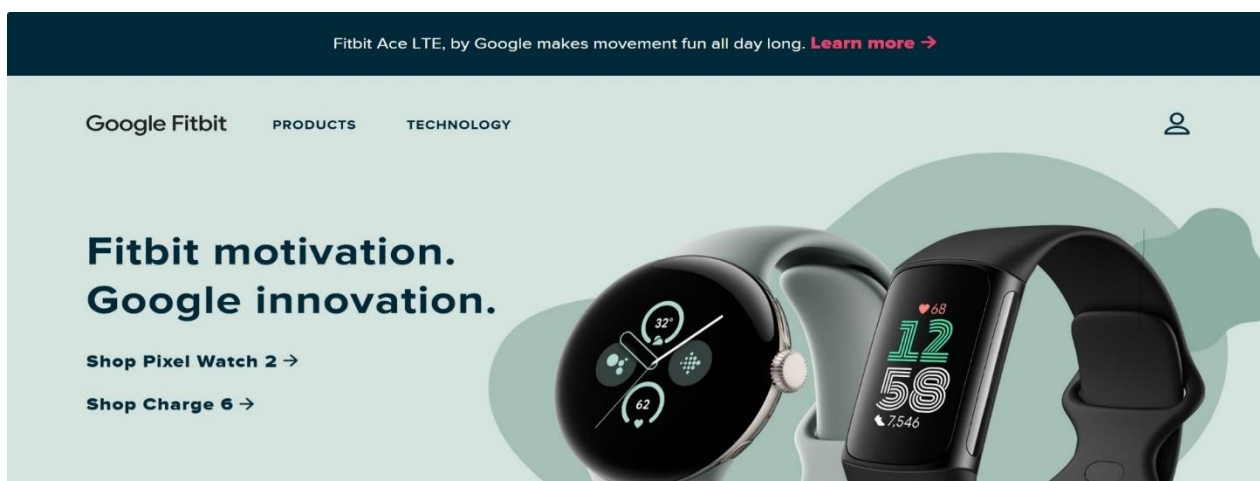

### 2. Front-End Inspirations:

[allrecipes.com](https://www.allrecipes.com)

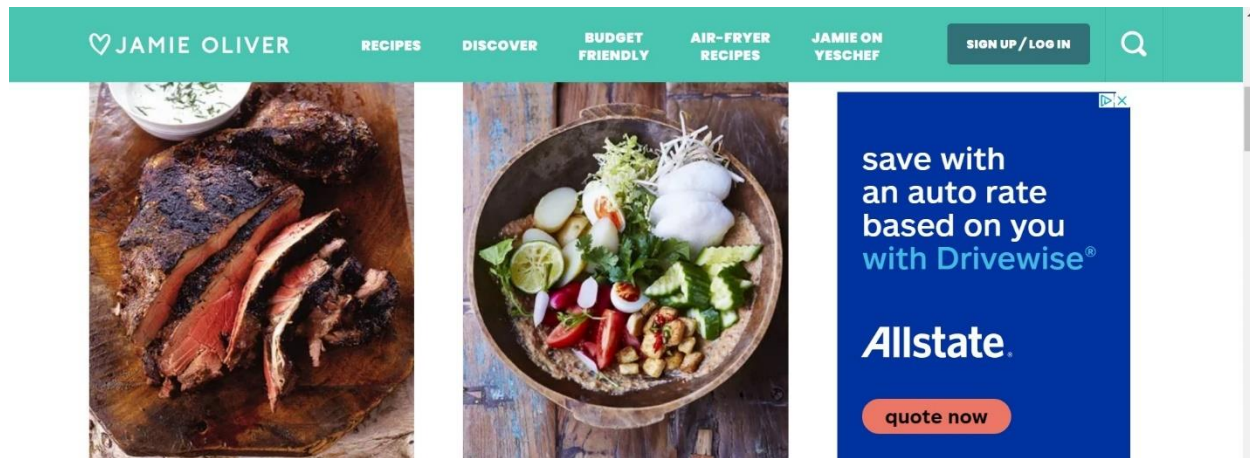

I like the simplicity of this app, you can see and find the recipes easily.

[Fitbit Official Site for Activity Trackers & More](https://www.fitbit.com)

This one is not a recipe app, but I love the color combination and inspired by it.

<https://www.jamieoliver.com/recipes/>

I also like the simplicity of this app.
